Washington, D.C. 20510

The Honorable Michael Enzi
U.S. Senate
SR-379A Russell Senate Office Building
Washington, D.C. 20510

The Honorable Maria Cantwell
U.S. Senate
SH-511 Hart Senate Office Building
Washington, D.C. 20510

The Honorable Bernie Sanders
U.S. Senate
SD-332 Dirksen Senate Office Building
Washington, D.C. 20510

Dear Chairman Murkowski, Chairman Enzi, Ranking Member Cantwell, and Ranking Member Sanders,

The undersigned organizations represent the Partner Caucus on Fire Suppression Funding Solutions, comprised of a diverse group of international, national and local organizations. The caucus is seeking a comprehensive solution to the wildfire suppression funding issue. We appreciate the Committee’s attention to the fire funding challenge and the opportunity to comment on the Senate Committee on Energy and Natural Resources’ discussion draft.

Historically, the need for transfers of funding from non-fire programs has limited the ability for the Department of the Interior and USDA Forest Service to suppress wildfires without impacting budgets of other fire prevention and management programs. Of more concern is how the increasing ten-year average for wildfire suppression has augmented this funding problem. Longer fire seasons, increasing development in the wildland-urban interface, and increased fuel loads are among the many factors that contribute to wildfire suppression costs.

The fire funding solution in the Committee’s discussion draft proposes to significantly decrease the need to transfer when appropriated funding is spent, but it’s a partial fix to addressing the impacts from rising wildland firefighting costs. This draft does not address the larger problem of shifting funding from non-fire programs to fire programs, resulting from the way firefighting funds are calculated, budgeted, and allocated. While the draft’s proposed funding to preventative programs and forest management reforms may be effective in decreasing suppression costs in the long run, an immediate budgetary solution is still needed to stop the problems associated with the rapidly increasing ten-year average. As that ten-year average used to calculate suppression increases and as budgets remain relatively flat, less is available for forest management and restoration, research, recreation and other critical private and public land objectives.

A comprehensive fire funding fix would 1) address the continued erosion of agency budgets that results from the increasing ten-year average and stabilize the level of funding for suppression within the agencies; 2) access disaster funding for extraordinarily costly fires, including those
that may be calculated as part of the ten-year average, and; 3) significantly reduce the need to transfer from non-suppression accounts and programs. To meet all these criteria, we recommend the draft be amended to fund suppression at 70 percent of the ten-year average, similar to the Wildfire Disaster Funding Act, or freezing the ten-year average, and accessing disaster funding for levels beyond.

Thank you for your consideration and important discussion of wildfire suppression funding issues and we look forward to continuing to work together.

Sincerely,

Partner Caucus on Fire Suppression Funding Solution
